

ultimax

Save up to 36,000 l of drinking water per year

Did you know that according to the World Toilet Organization, the average person uses the toilet about 2,500 times a year and uses an average of 6 liters of water per flush? A household with 4 family members uses 60,000 liters of water per year just to flush the toilet. If you use the Ultimax toilet, you can save 9,000 liters of water per person and a whole 36,000 liters of water per year for the household. With an average water and sewerage bill of 5 EUR per 1,000 liters, you can save about 180 EUR each year and your investment in the Ultimax toilet will be back in a few years. The Ultimax toilet has successfully passed all tests for obtaining CE certification with only 2.4 liters.
